

WEBfactory News 4/2010

Buchen, 04/30/2010

Dear Ladies and Gentlemen,

the so called **FDA conformity** is gaining ground and significance in Germany also, especially in the production sector. On the global market the FDA guidelines have established themselves as quasi a standard. For this reason WEBfactory has made its new Software Suite 2010 "FDA compliant".

Certified WEBXperts enjoy the economic advantages generated by the common distribution and marketing work with WEBfactory. In addition they receive assistance from WEBfactory by means fair activity and publication of their successes on the WEBfactory website and newsletter as well as by active press work. Get to know our new WEBXpert Interturbine –MES!

FDA-compliant: WEBfactory 2010 everywhere

The new Software Suite WEBfactory 2010 everywhere fulfils the guidelines of the US directive 21 CFR part 11 concerning electronic recordings and signatures. The directive created upon the initiative of the American Food and Drug Administration (FDA) regulates the quality insurance of processes etc. in the production of drugs, active agents and medical products, food and animal feed in connection with the electronic recording systems in compliance with the requirements of the "Good Manufacturing Practice".

WEBfactory 2010 everywhere thus fulfils the requirements for validation of its systems such as:

- Audit Trail (continuous logging of user activity, project changes and system states)
- Version management (Supervision of project changes outside runtime)
- Central user management with password change
- Production reports
- Digital signature

Connected: Native BACnet driver for WEBfactory 2010

For the new Software Suite WEBfactory 2010 everywhere there is already a native driver available for the BACnet-protocol. The native integration facilitates not only a lean design and an efficient interface, but also the abandonment of an OPC server, which brings a number of benefits:

- No OPC overhead
- No DCOM configuration required
- Integrated communication supervision
- Complete design within WEBfactory Software
- Performing import tools

Currently a large number of data objects are already supported. Until the end of the year a certification as BACnet Operator Workstation (B-OWS) will follow according to the ASHRAE – Standard.

Further specifications of the BACnet driver can be found in the [user manual](#).

Certified: New WEBfactory Certified WEBXpert Interturbine-MES

Since the end of April 2010 the Interturbine-MES GmbH is the "Certified Software and Solutions Partner" of WEBfactory 2010. The company based in Kaltenkirchen along with its 40 employees is a part of the globally active Interturbine group of companies. Interturbine-MES specialises in comprehensive system solutions in the sector of system controls and energy distribution. With its solutions, the company contributes to the safe and efficient production and distribution of electric and thermal energy. Due to its long-time experience Interturbine-MES has extensive competence in the design, production and set-up of complex control systems.

Efficient energy management requires a multifunctional automation technology. Its most important criteria are compatible interfaces, structured design and intuitive visualisation solutions for operation such as those of WEBfactory. Together with Interturbine-MES WEBfactory has implemented control and visualisation of the power plant „Abaco“ in the Bahamas for MAN Diesel & Turbine [...more](#)
